
SCREW DISCHARGERS AND MULTIPLE TROUGH SCREW CONVEYORS

Screw dischargers and multiple trough screw conveyors

COMPLETE DISCHARGING OF PRODUCTS WITH POOR FLOW CHARACTERISTICS SCREW DISCHARGERS

Screw discharger

With a screw discharger, even products with very poor flow characteristics can be reliably discharged from containers and silos. In combination with a frequency inverter, it is possible to regulate the discharge capacity continuously.

Screw dischargers are dimensioned and designed according to requirements.

The standard version is made of steel or stainless steel; the screw flights can also be manufactured from highly wear-resistant steel.

Multiple trough screw conveyors

Trough screw conveyors can be used as multiple screw conveyors if on-site conditions or the products themselves call for smaller screw diameters or low installation heights.

We design the size and number of the screw conveyors on an individual basis

Standard version: steel or stainless steel, screw flights also available in highly wear-resistant steel
